

Quantum Mechanics: Theory and Experiment

Mark Beck
Whitman College

Table of Contents

Preface

Table of Contents

Table of Symbols

1 Mathematical Preliminaries

- 1.1 Probability and Statistics
- 1.2 Linear Algebra
- 1.3 References
- 1.4 Problems

2 Classical Description of Polarization

- 2.1 Polarization
 - 2.2 Birefringence
 - 2.3 Modifying the Polarization
 - 2.4 Jones Vectors and Jones Matrices
 - 2.5 Polarization Interferometer
 - 2.6 References
 - 2.7 Problems
- Complements to Chapter 2:
- 2.A Coherence and Interference

3 Quantum States

- 3.1 State Vectors
- 3.2 Basis States
- 3.3 Other States
- 3.4 Probabilities

- 3.5 Complex Probability Amplitudes
- 3.6 Row and Column Vector Notation
- 3.7 Interference
- 3.8 Problems

4 Operators

- 4.1 Operators
 - 4.2 The Adjoint Operator
 - 4.3 The Projection Operator
 - 4.4 The Matrix Representation of Operators
 - 4.5 Changing Bases
 - 4.6 Hermitian Operators
 - 4.7 References
 - 4.8 Problems
- Complement to Chapter 4:
- 4.A Similarity Transformations

5 Measurement

- 5.1 Measuring Polarization
 - 5.2 The Postulates of Quantum Mechanics
 - 5.3 Expectation Values
 - 5.4 Operators and Measurements
 - 5.5 Commutation and Indeterminacy Relations
 - 5.6 Complementarity
 - 5.7 References
 - 5.8 Problems
- Complements to Chapter 5:
- 5.A 'Measuring' a Quantum State

6 Spin-1/2

- 6.1 The Stern-Gerlach Experiment
- 6.2 Spin States
- 6.3 More Spin States
- 6.4 Commutation Relations
- 6.5 Particle Interference
- 6.6 References
- 6.7 Problems

7 Angular Momentum and Rotation

- 7.1 Commuting Observables
 - 7.2 Angular Momentum Operators
 - 7.3 Eigenvalues and Eigenstates
 - 7.4 Spin-1
 - 7.5 Rotation
 - 7.6 Spin of a Photon
 - 7.7 References
 - 7.8 Problems
- Complements to Chapter 7:
- 7.A Compatible Observables
 - 7.B Eigenvalues and Eigenstates of Angular Momentum

8 Two-Particle Systems and Entanglement

- 8.1 Pairs of Photons
 - 8.2 Entangled States
 - 8.3 Mixed States
 - 8.4 Testing Local Realism
 - 8.5 References
 - 8.6 Problems
- Complements to Chapter 8:
- 8.A The Density Operator
 - 8.B The Bell-Clouser-Horne Inequality

8.C Two Spin-1/2 Particles

9 Time Evolution and the Schrödinger Equation

9.1 The Time-Evolution Operator

9.2 The Schrödinger Equation

9.3 Expectation Values

9.4 Spin-1/2 Particle in a Magnetic Field

9.5 Neutrino Oscillations

9.6 References

9.7 Problems

Complement to Chapter 9:

9.A Magnetic Resonance

10 Position and Momentum

10.1 Position

10.2 Momentum

10.3 The Momentum Basis

10.4 Problems

Complement to Chapter 10:

10.A Useful Mathematics

11 Wave Mechanics and the Schrödinger Equation

11.1 The Schrödinger Equation Revisited

11.2 Constant Potential—the Free Particle

11.3 Potential Step

11.4 Tunneling

11.5 Infinite Square Well

11.6 References

11.7 Problems

Complements to Chapter 11:

11.A Wave Packet Propagation

12 The Harmonic Oscillator

12.1 Why Study the Harmonic Oscillator?

12.2 Creation, Annihilation and Number Operators

12.3 Wave Functions

12.4 Fock States and Photons

12.5 Coherent States

12.6 References

12.7 Problems

Complement to Chapter 12:

12.A Solving the Schrödinger Equation Directly

13 Wave Mechanics in Three Dimensions

13.1 The Schrödinger Equation in Three Dimensions

13.2 Central Potentials

13.3 Orbital Angular Momentum

13.4 The Hydrogen Atom

13.5 Multielectron Atoms

13.6 References

13.7 Problems

Complements to Chapter 13:

13.A Quantum Dots

13.B Series Solution to the Radial Equation

14 Time-Independent Perturbation Theory

14.1 Nondegenerate Theory

14.2 Degenerate Theory

14.3 Fine Structure of Hydrogen

- 14.4 Hyperfine Structure of Hydrogen
- 14.5 The Zeeman Effect
- 14.6 References
- 14.7 Problems

15 Time-Dependent Perturbation Theory

- 15.1 Time Evolution of the State
- 15.2 Sinusoidal Perturbations
- 15.3 Atoms and Fields
- 15.4 The Photoelectric Effect
- 15.5 References
- 15.6 Problems

Complement to Chapter 15:

- 15.A Einstein's A and B Coefficients

16 Quantum Fields

- 16.1 The Schrödinger and Heisenberg Pictures of Quantum Mechanics
- 16.2 The Field Hamiltonian
- 16.3 Field Operators
- 16.4 Field States
- 16.5 Fully Quantum Mechanical Atom-Field Interactions
- 16.6 Quantum Theory of Photoelectric Detection
- 16.7 Beam Splitters
- 16.8 References
- 16.9 Problems

Complement to Chapter 16:

- 16.A Second-Order Coherence and the Grangier Experiment

17 Quantum Information

- 17.1 Qubits and Ebits

- 17.2 Quantum Cryptography
- 17.3 The No-Cloning Theorem
- 17.4 Quantum Teleportation
- 17.5 Quantum Computing
- 17.6 References
- 17.7 Problems

Laboratories

- Getting Started
- Before Lab
- Important Laboratory Safety Tips

Lab 1: Spontaneous Parametric Downconversion

- Lab Ticket
- L1.1 Introduction
- L1.2 Aligning the Crystal
- L1.3 Aligning Detector A
- L1.4 Aligning Detector B
- L1.5 Angular Correlations – Momentum Conservation
- L1.6 Polarization
- L1.7 Timing
- L1.8 References

Lab 2: 'Proof' of the Existence of Photons

- Lab Ticket
- L2.1 Introduction
- L2.2 Theory
- L2.3 Aligning the Irises and the Beam Splitter
- L2.4 Aligning the B' Detector
- L2.5 Measuring $g^{(2)}(0)$ for a Single Photon State

L2.6 Two-Detector Measurement of $g^{(2)}(0)$

L2.7 References

Lab 3: Single Photon Interference

Lab Ticket

L3.1 Introduction

L3.2 Aligning the Polarization Interferometer

L3.3 Equalizing the Path Lengths

L3.4 The Polarization Interferometer

L3.5 Single Photon Interference and the Quantum Eraser

L3.6 “Experiment 6”

L3.7 Particles and Waves

L3.8 References

Lab 4: Quantum State Measurement

Lab Ticket

L4.1 Introduction

L4.2 Alignment

L4.3 Measurement of Linear Polarization States

L4.4 Measurement of Circular and Elliptical Polarization States

L4.5 References

Lab 5: Testing Local Realism

Lab Ticket

L5.1 Introduction

L5.2 Theory

L5.3 Alignment

L5.4 Creating the Bell State

L5.5 Exploring Quantum Correlations--Entangled States and Mixed States

L5.6 Testing the CHSH Inequality

L5.7 Measuring H

L5.8 Optimizing Your Results

L5.9 Last Experiment

L5.10 References
