

The text can be found on the class web page, in two formats, pdf and web:

<http://people.whitman.edu/~guichard/167>

You also can find a variety of C++ books and tutorials; I have some links to a few on the class web page.

If you plan to continue programming in C++ you may want to purchase *The C++ Programming Language* by Bjarne Stroustrup, who designed the language.

The course requirements and their weights:

homework	50%
midterm	25%
final	25%

Programming assignments will be due (almost) weekly. I will deduct one point per day (including weekends and breaks) for programs turned in late, and all programs must be turned in by the last day of classes.

You may discuss the projects among yourselves, but the final product must be your own work. You may if you wish work in teams of two, turning in one assignment and each getting the same grade. You need not keep the same partner for the entire semester.

Office hours: posted next to my door and also linked from the class web page.

My “office hours” are times when I guarantee (barring emergency) to be in my office. I am usually there most of the day when not in class, and you are welcome to just drop by. If you want to be sure to see me outside of guaranteed hours, just make an appointment by phoning, emailing or talking to me in person.
